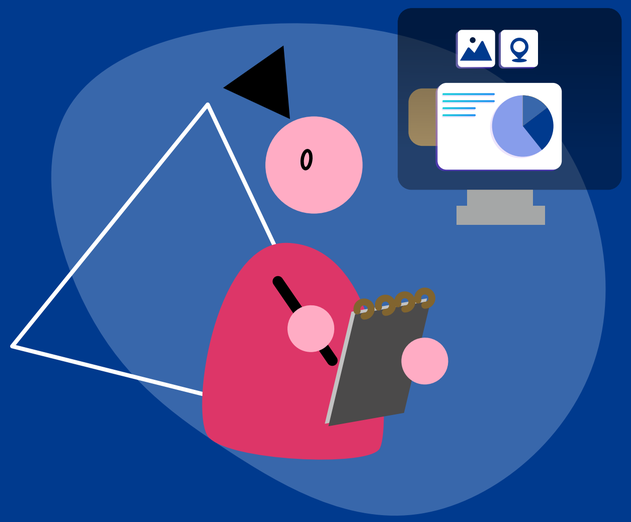
Web Apps -UI

Modern web experiences aim to deliver the best possible experience to the widest possible audience, regardless of browser or device. It embraces the variability of the web by prioritizing content delivery to all browsers, and then progressively layer enhancements according to the device or browser capabilities



Single-Page Application (SPA)

A single-page application is an app that works inside a browser and does not require page reloading during use. You are using this type of applications every day. These are, for instance: Email, Google Maps, Facebook or GitHub. SPA are all about serving an outstanding UX by trying to imitate a “natural” environment in the browser — no page reloads, no extra wait time.

Progressive Web Apps (PWA)

Progressive Web App (PWA) is a term used to denote a new software development methodology. Unlike traditional applications, progressive web apps are a hybrid of regular web pages (or websites) and a mobile application. This new application model attempts to combine features read by most modern browsers with the benefits of mobile experience

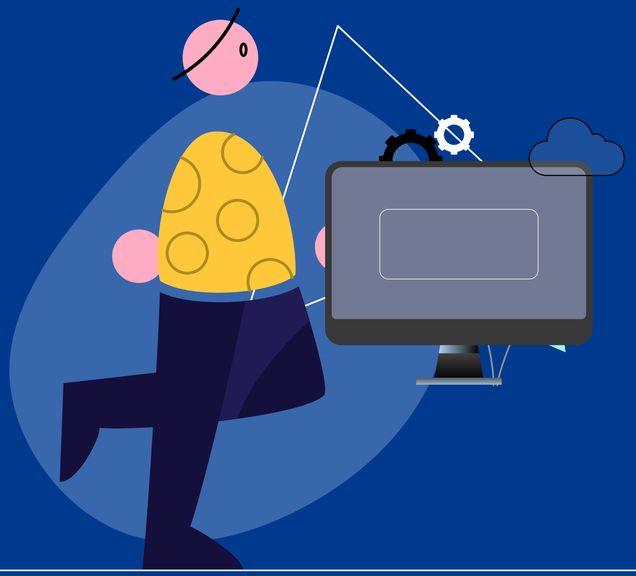
Web Apps -API

Building business logic as services to help any interface to communicate seamless, scalable, resilient and cohesive using Restful architecture and Micro services approach.



Restful API

One of the most popular types of API is REST or they are sometimes known, RESTful APIs. REST or RESTful APIs were designed to take advantage of existing protocols. While REST – or Representational State Transfer – can be used over nearly any protocol, when used for web API it typically takes advantage of HTTP.

- Statelessness
- Safety & Idempotent
- Caching
- Representations

Micro Services

Micro service architecture is a method of developing software applications as a suite of independently deployable, small, modular services in which each service runs a unique process and communicates through a well-decked, lightweight mechanism to serve a business goal.

- Single Responsibility Principle
- Domain Driven Development
- Bounded Context
- Independently Managed

UI/UX Design

User research helps identify and target the right problems by understanding your users. We use your product and business goals to done a successful product strategy, grounded in real user data and touch points.

UI/UX Development

At YellowBlock, we specialize in UI/UX development, combining our expertise in user interface design and user experience to create exceptional digital experiences. Our team of skilled developers brings your UI/UX designs to life, ensuring seamless functionality, intuitive interactions, and optimal performance.

Wireframing & Prototyping

We create wireframes and interactive prototypes to test the design concepts and get feedback from users. These are low-fidelity representations of the product, which are used to test the usability and overall user experience.

Mobile App Design

In the digital landscape, visual design plays a critical role in capturing the attention of your audience and creating a memorable brand experience.

Visual Design – High fidelity

At YelloBlock, we specialize in Mobile App Design with a strong focus on delivering intuitive and captivating User Interface (UI) and User Experience (UX) designs.

Front-end Development

At YellowBlock, we specialize in front-end development services that bring your company website to life. Our team of skilled front-end developers is dedicated to creating engaging and user-friendly interfaces that align with your brand and meet the needs of your target audience.

CMS Integration

Efficiently managing your website's content is essential for maintaining a dynamic online presence and delivering up-to-date information to your audience. At YellowBlock, we specialize in CMS integration services that empower you to take control of your website's content with ease. Our experienced team will seamlessly integrate a Content Management System (CMS) into your website, providing you with a user-friendly interface to manage, update, and publish content.

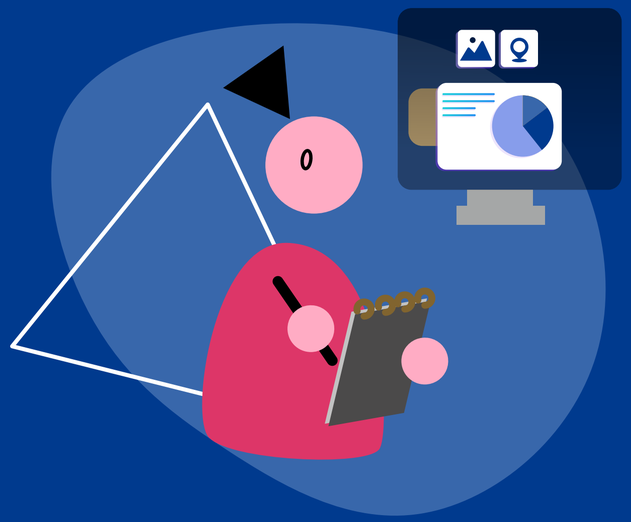
DevOps Services

Our DevOps services company streamlines your software deployment process, accelerates your software delivery, and optimizes the pipeline with pioneering DevOps solutions.



Continuous Integration

Continuous Integration (CI) integrates code alterations from many developers into a single source repository multiple times a day. This significantly helps in the early detection and resolution of errors, thereby eliminating the risk of bugs in the final product

Continuous Delivery

With Continuous Delivery (CD), we can reduce the time and effort required to release software updates, while improving the reliability and speed of delivery.

Configuration Management

Our Configuration system in the DevOps solution offers code management, platform automation that gives your customers a ready-to-use server/service in the cloud.

Continuous Testing

Continuous Testing helps organizations stay ahead of the curve by reducing the time required to test and deploy updates, while also improving the overall quality of the software

Mobile Apps

The global mobile phone users spend 87% of their time in apps and about 200 billion mobile applications are downloaded every year. In a digital era where customers rely on mobile apps to complete most of their tasks, a well-crafted mobile app can help businesses increase the visibility of their brands, improve users' experience, and increase engagement with customers.

iOS Application Development

In the present scenario, more than 700 million people use I Phones globally. With an engaging iPhone app, enterprises can reach a huge audience at once and can improve collaboration & communication with their existing and potential customers.

Precursor possesses comprehensive knowledge of UI Kit, G Data, SQLite, etc., and capitalizes on its expertise in Objective-C and Swift to develop iPhone and iPad apps. Our skilled iOS developers ensure that the iOS applications developed by them help clients reap the maximum benefits from the iOS ecosystem.

Android Application Development

Android has accounted for over 80% of all smartphones worldwide, and it is foretasted that it will continue to maintain its leadership, accounting for about 85% of all smartphones shipments globally. Businesses can target this wide user base by investing in Android apps

Precursor has a team of experienced Android developers who are well-versed with Android SDK, MVP, Live Data, Data Binding, and other Android Jet pack Component. The Android apps crafted by us are attuned to your active mobile strategies and are backed by feature-rich functionality and intuitive UI.

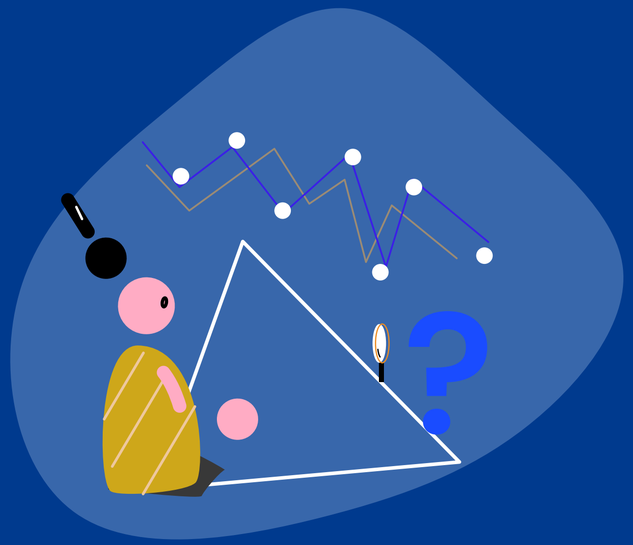
How We Do It ?

Typically done at the start of a project, it encompasses different types of research methodology to gather valuable data and feedback. Design agency



01 Empathize

As a thriving UI UX agency, we harness the proven empathy-driven human-focused design process to craft the best digital solutions mapping the users preferences

02 Define (the Problem)

Apt logic and detailing is incorporated precisely with elements like design functions, features, functionalities, workflow and beyond to solve complex issues with minimal snags

03 Ideation

With Proven ideation techniques combined with a client-centric approach at the core, we ideate roadmaps while mapping your business journey to decode human-focused problem statements

04 Prototype

We develop a results-focused prototype meant to build an authentic digital connection with the utmost level of detail and quality based on diversified experiments.

05 Testing

We fine-tune our designs using state-of-the-art testing techniques by testing the overall product usability at OFNI channel platforms to impart a clear big picture of design
experience

YELLOW BLOCK

Project Execution Process

Release automation solves the quaint and modern puzzle. End users just not only want more changes but want them faster. Satisfying that eager demand is simply out of reach of the traditional development model. DevOps methodology is the ideal route to "faster builds and deployments"; it helps you to speed up software development, testing and deployment and streamline automated releases
